

Creating a Wimba Live Classroom in WebCT CE6

1. Sign into WebCT and enter the class you wish to add a Live Classroom to. All of the Wimba components are now integrated into each course and can be added just like discussions, assignments, and learning modules. In the Build tab, click on 'Add Content Link', and then on 'Live Classroom' ...

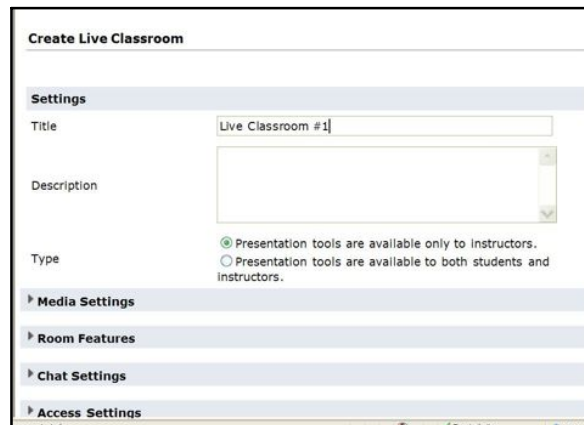

2. Click on 'Create Live Classroom'. The next screen will prompt you to name your new room. Click on 'Continue'.

3. The screen that follows already has the selection (Create a New Room) made for you, simply click on 'Continue' again.

4. The next screen contains a series of setting selections. If you are unsure about any of these, the default settings are the most commonly used and will probably suffice. Click on 'Create Room' once you have the settings configured to your liking.

5. Return to your Course Content home page and there you will see the new icon and link to your Live Classroom. To test this link, in the Teach tab, click on the icon, then on 'Enter This Room'. A new browser window will open and the program will launch. It may take a moment to load. Your name should appear in the lower right pane under 'people' and the audio and mic levels will automatically be detected by the program. You are ready to go!
