

TiVo Setup Guide

1. Plug in the Ethernet adapter. (Supported adapters linksys200m ver.1 linksys 200m ver. 2 are recommended. For a full listing see <http://www.tivo.com/adapters>)
 - a. If you receive an error that the network device is not supported while running the initial configuration, you will need to use the phone line to initially set up and get software updates to version 7.3.1 or newer.
 - i. **Phone setup:** in the TiVo central menu select:
 - a. messages and settings
 - b. settings (from this menu)
 - c. phone and network
 - d. change phone settings
 - e. click to the right
 - f. select dial prefix
 - g. here you will configure the dialing protocol so that it looks like such
 - i. 9,,6919718,,(your PBN)
 - ii. To get the “,” use the pause
 - h. once this is configured, allow the box to update itself checking it occasionally to see what the current software version is
 - i. to do this from the TiVo central menu select:
 1. messages and settings
 2. account and system information

3. system information and look for the version of the software in the first window
 - j. once you are software version 7.3.1 you are able to use the network adapter from here on out to do this:
 1. be at the phone and network page again and select “network device” instead
 2. you will select to get ip automatically from DHCP
 3. you will select no DHCP ID needed
2. Once these steps have been completed you are able to have the device plugged into the Ethernet in your room. You will be able to receive your updates and listings as needed.
