

CHAPTER 4: WAVE PROPAGATION, ATTENUATION, POLARIZATION, REFLECTION, REFRACTION, AND DIFFRACTION

Wave Equation:
$$\frac{\partial^2 E_y}{\partial t^2} = \frac{1}{\mathbf{m}\mathbf{e}} \frac{\partial^2 E_y}{\partial x^2}$$

Characteristic Impedance:
$$Z = \sqrt{\frac{\mathbf{m}}{\mathbf{e}}} \text{ } [\Omega]$$

Velocity of an EM Wave:
$$v = \mathbf{I}f = \frac{1}{\sqrt{\mathbf{m}\mathbf{e}}} \text{ } [\text{m/s}]$$

Impedance of a Conducting Medium:
$$Z = \sqrt{\frac{j\omega\mathbf{m}}{\mathbf{s} + j\omega\mathbf{e}}} \text{ } [\Omega]$$

Conductive Medium w/ Conductive, Magnetic, & Dielectric Losses:
$$Z = \sqrt{\frac{\omega\mathbf{m}'' + j\omega\mathbf{m}'}{\mathbf{s} + \omega\mathbf{e}'' + j\omega\mathbf{e}'}} \text{ } [\Omega]$$

Complex Permittivity and Permeability:
$$\mathbf{e} = \mathbf{e}' - j\mathbf{e}'' \text{ } [\text{F/m}] ; \mathbf{m} = \mathbf{m}' - j\mathbf{m}'' \text{ } [\text{H/m}]$$

VSWR:
$$VSWR = \frac{1 + |\mathbf{r}|}{1 - |\mathbf{r}|} ; \mathbf{r} = \frac{VSWR - 1}{VSWR + 1}$$

Conductors & Dielectrics: Conductors $\frac{\mathbf{s}}{\omega\mathbf{e}} > 100 ; \omega\mathbf{e} \ll \mathbf{s}$

Quasi-Conductors $\frac{1}{100} < \frac{\mathbf{s}}{\omega\mathbf{e}} < 100 ; \omega\mathbf{e} \approx \mathbf{s}$

Dielectrics $\frac{\mathbf{s}}{\omega\mathbf{e}} < \frac{1}{100} ; \omega\mathbf{e} \gg \mathbf{s}$

Attenuation & Propagation Constant:
$$\mathbf{g}^2 = j\omega\mathbf{m}\mathbf{s} - \omega^2\mathbf{m}\mathbf{e} = (\mathbf{a} + j\mathbf{b})^2$$

For Conductors:
$$\mathbf{g} = \sqrt{j\omega\mathbf{m}\mathbf{s}} = (1 + j)\sqrt{\frac{\omega\mathbf{m}\mathbf{s}}{2}} = \mathbf{a} + j\mathbf{b}$$

Depth of Penetration (Skin Depth):
$$\mathbf{d} = \frac{1}{\sqrt{f\mathbf{p}\mathbf{m}\mathbf{s}}} ; \text{Depth for } 1/e \text{ decrease in } E \text{ in conductor}$$

Loss Tangent: $\tan \delta = \frac{\mathbf{s}'}{\mathbf{w}e'}$

Reflection and Transmission Coefficient: See Table posted on webpage.

Index of Refraction: $n = \frac{c}{v} = \sqrt{\mathbf{m}_r \mathbf{e}_r}$

Poynting Vector: $\vec{S} = \vec{E} \times \vec{H} \quad [\text{Wm}^{-2}]$

Average Poynting Vector Magnitude: $S_{av} = \frac{1}{2} \text{Re}\{HH^*Z\} = \frac{1}{2}|H|^2 \text{Re}\{Z\} = \frac{1}{2}|E|^2 \text{Re}\left\{\frac{1}{Z}\right\}$

Snell's Law: $n_2 \sin \mathbf{q}_t = n_1 \sin \mathbf{q}_i$

Critical Angle: $\mathbf{q}_{ic} = \sin^{-1}\left(\sqrt{\frac{\mathbf{e}_2}{\mathbf{e}_1}}\right)$

Diffraction from an Edge: $S_{av} = \frac{1}{2} \left(\frac{1}{\mathbf{lka}}\right)^2 = \frac{r\mathbf{l}}{4\mathbf{p}^2 a^2}; \mathbf{k} = \sqrt{\frac{2}{r\mathbf{l}}}$

CHAPTER 5: ANTENNAS, RADIATION, AND WIRELESS SYSTEMS

Beam Solid Angle:
$$\Omega_A = \iint_{4\mathbf{p}} P_n(\mathbf{q}, \mathbf{f}) d\Omega = \int_{\mathbf{f}=0}^{2\mathbf{p}} \int_{\mathbf{q}=0}^{\mathbf{p}} P_n(\mathbf{q}, \mathbf{f}) \sin\mathbf{q} d\mathbf{q} d\mathbf{f} \approx \mathbf{q}_{HP} \mathbf{f}_{HP}$$

Directivity:
$$D = \frac{4\mathbf{p}}{\Omega_A} = \frac{4\mathbf{p}}{\mathbf{q}_{HP} \mathbf{f}_{HP}} = \frac{41,000}{\mathbf{q}_{HP} \mathbf{f}_{HP}}$$

Arbitrary Center-Driven Dipole Antenna:
$$\vec{E} = \hat{\mathbf{q}} Z \frac{j I_{max} e^{-jbr}}{2\mathbf{p} r \sin \mathbf{q}} \left[\cos\left(\frac{\mathbf{b}L}{2} \cos \mathbf{q}\right) - \cos\left(\frac{\mathbf{b}L}{2}\right) \right] [\text{V/m}]$$

Total Power Radiated by $I/2$ Center-Driven Dipole:
$$P_T = \frac{I_{max}^2 Z (24376)}{8\mathbf{p}} [\text{W}]$$

Total Power Radiated by Short Dipole:
$$P_T = \sqrt{\frac{\mathbf{m}}{\mathbf{e}}} \frac{(\mathbf{b} I_{av} L)^2}{12\mathbf{p}} [\text{W}]$$
