Integrative Learning Outcomes

At the end of their coursework at USD, students should be able to do the following:

1. Recognize broad connections between multiple disciplines, perspectives, and/or approaches to learning.

2. Articulate how the integration of different disciplines, perspectives, and approaches to learning can enhance ones’ understanding of practical issues and problems.

3. Synthesize knowledge and/or skills from multiple disciplines or perspectives.

4. Apply knowledge and/or skills from multiple disciplines or perspectives.

Notes:

The first two outcomes can be demonstrated at all levels, but are particularly relevant to the experiences of students in the LLCs.

The third and fourth outcomes can also be demonstrated at all levels, but are particularly relevant to the experiences of more advanced students who are completing their Core Project.
