SECTION I – INFORMATION FOR VENDORS

1.1 PURPOSE: The University of San Diego (USD) is seeking bids from qualified vendors to remove and replace 30 Blink Electronic Vehicle Charging Stations (EVCS) as detailed in the scope of work and attachments. The goal of this RFP is to obtain a turnkey solution, including but not limited to designing, furnishing, and installation of the requested charging stations.

1.1.2 INTENT: Based on this RFP, USD intends to award a single contract to the responsible Vendor whose bid proposal, conforming to this RFP, is most advantageous to the University, price and other factors considered. USD reserves the right to issue multiple contracts or to separately procure individual requirements that are the subject of the contract during the contract term, when deemed by the University to be in its best interest.

1.1.3 TERMS: USD’s standard Terms & Conditions (see attachment marked Terms & Conditions) will apply to all contracts or purchase order. These terms are in addition to the terms and conditions set forth in this RFP and should be read in conjunction with them unless the RFP specifically indicates otherwise.

1.2 BACKGROUND

USD is a private Catholic institution of higher education, located on over 180 acres overlooking San Diego's Mission Bay. Chartered in 1949, USD enrolls just over 8900 students who may choose from more than 70 undergraduate and graduate degree programs. The student population has approximately 5,774 undergraduate, 2,138 graduate and 993 law students.

The USD campus supports six schools and one college, with over 909 faculty and over 2,000 administrative, staff and temporary employees. The majority of the University buildings are on the main campus with some residence halls and offices located off-site.

1.2.1 SCOPE OF WORK

The initial phase of this project includes the furnishing of all labor and materials for the removal and disposal of the existing 30 Blink Electronic Vehicle Charging Stations on the USD campus, and replacing them with charging stations to service a number of cars simultaneously (See Exhibit A – Scope of Work). The charging stations are located in various areas across the USD campus, and we seek to use the existing electrical infrastructure that serves these sites (See Table 1). The vendor will manage all operations, maintenance and financial aspects of the charging stations. USD is interested in all economic or business models for this project.

The equipment selected must be able to accept Vehicle to Grid (V2G) software so that this option may be used by the university in the future under a potential second phase of this project. Future phases may also increase the number of charging stations on campus.

Future phases of USD’s electric vehicle infrastructure will be determined by EVCS usage data and expert guidance from USD faculty & staff and consultants. Due to preferences and legislation, electronic vehicles are expected to become a larger percentage of the California driving fleet. Analysis of USD commuter vehicle make & model data over the coming years will establish the composition of commuter vehicles and determine if and how much to expand the number of stations on campus. It will also provide insight into what lots would be better locations for new stations. Beginning in Fall 2019, information for this analysis will be acquired from the vehicle make and model data collected by Parking Services during the registration process. Data may also be available through the license-plate reading technology that will be deployed on campus.

Rates for electricity, particularly transmission and demand charges, will continue to increase. Though we can control some of our costs by expanding on-site generation of electricity, we must also consider demand response options to keep costs down. To that end, the option of utilizing V2G technology in future applications will be assessed. V2G does not appear to be useful for USD currently, as utilization of electronic vehicle stations is not consistent enough nor does it occur at the right times to justify the investment. However, as this may change rapidly, V2G compatible EVCS will be deployed in Phase 1.

**Codes and Standards**

At a minimum the following codes, standards or regulations shall be used for this project:

1) Applicable OSHA and CAL/OSHA Regulations

2) California Fire & Building Safety Code
